

418/408

Non-return ball valve (flanged)

B System

Technical Data Sheet

Description

The non-return ball valve (flanged) 418/408 consists of a self-cleaning ball lifted by the fluid and guided to a lateral seat, completely out of the way. This system provides a full-flow, even with loaded fluids, without any risk of blockage.

- Vertical and horizontal operation (position of the ball above the axis of the pipe)
- Minimum head loss
- Silent, robust
- Non incrustating materials
- Sealing guaranteed by the coating of the ball

418/408

Non-return ball valve (flanged) - B System

DN	PN	PFA in bar	PS in bar				Cat	Ref.	Weight Kg
			L1	L2	G1	G2

14	350*	10	10	10	0,5	10	I	149B2909	345,6

*Type 408

Options: Specific coating and flanges drilling, thickness 250µm, ball's ballast from DN 80 to DN350 different ball weights are sometimes necessary to prevent vibration and water hammer, stainless steel screws A4, materials ... consult us

Important notice :

The indicated pressure for the different categories of fluids (L1/L2/G1/G2) is under no condition a guarantee of use. Therefore, it is essential to validate the use of products under given operating conditions.

Technical features

Operating temperature	-10 °C to 80 °C
Permissible operating pressure (PFA) in water	See table above
Maximum permissible pressure (PS) other mediums	See table above
Connection	Flanges drilled PN (see table)
Mediums	Wasted water, viscous liquids, loaded liquids, thick liquid, gas

Nomenclature and materials

N°	Description	Materials	EURO	ANSI
1	Body	Cast iron / Epoxy	EN 1563, EN-GJS-400-15	ASTM A 536 60-40-18
2	Ball	Aluminium / NBR		
		Cast iron / NBR		
3	Cover	Cast iron / Epoxy	EN 1563, EN-GJS-400-15	ASTM A 536 60-40-18
4	Seal	NBR		
5	Screw-washer	Stainless steel A2	EN 10088-3 X5Cr-Ni18-10	NF EN 150 3506

Option : the component list may be substituted with equivalent or higher class materials without prior notification.

Approvals

International construction Standards :

Directive 2014/68/UE
CE Conformity Regulation 305/2011/UE Standard EN12050-4
Flange drilling according to EN558

Length according to EN558 48 serie (except DN 350 : type 408)
Cast iron body EN-GJS 400-15
Tightness : Category A according to ISO 5208

Tests :

Hydraulic test according to EN 12050-4

Application

The non-return ball valve (flanged) 418/408, designed in accordance with EN 12050-4, provides optimum protection of the pumps against the backflow in the pumping stations of wasted water and charged or viscous fluids.

Installation

Installation :

Before putting valve into operation, check that:

- the working conditions are compatible with the details given on the identification plate, the instruction notice and the manufacturer's detail,
- the valve works effectively when tried (carry out a few opening and closing operations of the closing system),
- the valve is free-pollution inside.

On a new installation or after maintenance, the circuit have to be rinsed with the valve completely open in order to remove solid matter which may damage the internal parts of the valve.

Commissioning :

The installation should be put under pressure progressively to avoid damage which might occur to internal components. Make sure that when flow stops the valve maintains pressure well and that there is no water-hammer which might damage the valve or installation. If there is water-hammer, an anti-water hammer system must be added to the installation. During a prolonged stoppage, a change in the state of the fluid may result in damage when the installation is brought back into service (solidification...). Establish an adequate procedure program for cleaning the system.

Maintenance

• Removing :

1. Unscrew the support screw assembly (N°5)
2. Remove the cover (N°2)
3. Remove the O-ring (N°4)
4. Tip over the body (N°1) for remove the ball (N°3)

• Reassembly :

Before reassembling the valve, check the condition of the seal. If necessary, clean and grease it by using appropriate grease.

1. Place the ball (N°3) in the body (N°1)
2. Put in place the O-ring (N°4) on the cover (N°2)
3. Put in place the cover (N°2) on the body (N°1)
4. Tighten the screw assembly (N°5) to the contact and then :
 - a. Tighten to the couple of 35 Nm for the FIG.418 up to DN100 included
 - b. Tighten with a suitable tool for the others references

Type 418

Type 408

Operation

Direction for use :

- Solid line: Valve completely open
